

Elderly Care Management System(ECMS) – Yr 4 Project

By Qadeer Hussain

Supervisor: Paul Barry

The ECMS Project

- The emphasis of this project is to create a secure application which confines to the HL7 storage and encryption standard
- The creation of this application will help alleviate and modernize patient data management replacing documentation with a digital system

Who is it for

- Care Home
- Care Office Staff (Admin)
- Carer's

User Features

- Login
- Register
- Patient Profile
- Care Plan
- Medical Dashboard
- Roster
- Incident Reporting
- Alert

Backend Features

- Health Level 7
- Security (Cryptography)
 - Shared Key encryption
 - Public Key encryption

Technologies

django

MariaDB

Existing Systems

Potential Issues/Challenges

- This will be a learning curve for me as I will get an opportunity to gain more knowledge about cryptography.
- Adhering to the Health Level 7 Standards.
- Time management to adhere to deadlines.

Thank you
any Questions?

Elderly Care Management System – Yr 4 Project

-By Qadeer Hussain Date: 25/10/2024

Figure [1]

What are the Core features?

This is a list of features that will be included in this project:

- Implementing Security
- Patient Profile
- Care Planner
- Medical Dashboard
- Roster

Figure [5]

Figure [6]

What is the project?

- It is a secure web application to safeguard and manage patient data in care centres.
- Digital documentation to streamline workflow.
- Application designed to cater Admin and Carer.

What is Health Level 7 (HL7)?

- Framework for the exchange, integration, sharing and retrieval of health information.
- Most used standard globally.
- HL7 specifies several standards, guidelines and methodologies for health-related systems.

Existing Systems

- Pass App
- Log my Care
- Nourish

Technologies

Here are some possible technologies that could be used for example:

- Python: <https://www.python.org/>
- Django: <https://www.djangoproject.com/>
- MariaDB: <https://mariadb.org/>
- Cryptography lib: <https://pypi.org/project/cryptography/>

What is Shared Key and Public Key?

- Shared key is a form of cryptography.
- Also known as Symmetric encryption.
- Method of encrypting data and decrypting data using one key.
- Public key is a form of cryptography.
- Also known as Asymmetric encryption.
- Method of encrypting and decrypting data using two keys.
